Information sharing and access: The multiple views of inter-organizational authoring David W. McDonald, Chunhua Weng, John H. Gennari

November 2004 Proceedings of the 2004 ACM conference on Computer supported cooperative work

Full text available: pdf(935.59 KB) Additional Information: full citation, abstract, references, index terms

Collaborative authoring is a common workplace task. Yet, despite improvements in word processors, communication software, and file sharing, many problems continue to plaque co-authors. We conducted a qualitative study in a setting where participants are loosely connected, physically separated, and work together over a period of 4-9 months to author a complex technical document-a clinical trial protocol. Our study differs from most prior work in that the collaboration is longer-lived, and that ...

2 Industrial/government track: Clinical and financial outcomes analysis with existing hospital patient records

R. Bharat Rao, Sathyakama Sandilya, Radu Stefan Niculescu, Colin Germond, Harsha Rao August 2003 Proceedings of the ninth ACM SIGKDD international conference on Knowledge discovery and data mining

Full text available: pdf(188.40 KB) Additional Information: full citation, abstract, references, index terms

Existing patient records are a valuable resource for automated outcomes analysis and knowledge discovery. However, key clinical data in these records is typically recorded in unstructured form as free text and images, and most structured clinical information is poorly organized. Time-consuming interpretation and analysis is required to convert these records into structured clinical data. Thus, only a tiny fraction of this resource is utilized. We present REMIND, a Bayesian Framework for Reliable ...

	Current search tools on the Web, such as general-purpose search engines (e.g. Google) and domain-specific portals (e.g. MEDLINEplus), do not provide search procedures that guide users to form appropriately ordered sub-goals. The lack of such procedural knowledge often leads users searching in unfamiliar domains to retrieve incomplete information. In critical domains such as in healthcare, such ineffective searches can have dangerous consequences. To address this situation, we developed a new typ

Healthcare management operates in an environment of aggressive pricing, tough competition, and rapidly changing guidelines. Computer simulation models are increasingly used by large healthcare institutions to meet these challenges. However, small healthcare facilities serving the poor are equally in need of meeting these challenges but lack the finances and personnel required to develop and implement their own simulation solutions. An academic medical center, healthcare facilities that serve the ...

21 Multimedia courseware on HIV/AIDS

Nor Hazilawati Awang

April 2000 ACM SIGBIO Newsletter, Volume 20 Issue 1

Full text available: pdf(376.85 KB) Additional Information: full citation, abstract, index terms

This project aimed at developing a multimedia courseware on HIV/AIDS for two levels: 1) Beginner level, targeting patients and their families, as an awareness tool for general knowledge, and 2) Expert level, targeting medical students and researchers. A CD has been developed. Some of the topics discussed are included in this article.

²² An algebra for composing access control policies

Piero Bonatti, Sabrina De Capitani di Vimercati, Pierangela Samarati February 2002 ACM Transactions on Information and System Security (TISSEC), Volume 5

Additional Information: full citation, abstract, references, citings, index Full text available: pdf(384.06 KB)

Despite considerable advancements in the area of access control and authorization languages, current approaches to enforcing access control are all based on monolithic and complete specifications. This assumption is too restrictive when access control restrictions to be enforced come from the combination of different policy specifications, each possibly under the control of independent authorities, and where the specifics of some component policies may not even be known apriori. Turning individu ...

42 Research sessions: security and privacy: Secure XML querying with security views Wenfei Fan, Chee-Yong Chan, Minos Garofalakis

June 2004 Proceedings of the 2004 ACM SIGMOD international conference on Management of data

Full text available: pdf(229.47 KB) Additional Information: full citation, abstract, references

The prevalent use of XML highlights the need for a generic, flexible access-control mechanism for XML documents that supports efficient and secure query access, without revealing sensitive information unauthorized users. This paper introduces a novel paradigm for specifying XML security constraints and investigates the enforcement of such constraints during XML query evaluation. Our approach is based on the novel concept of security views, which provide for each user group (a) an XML view ...

Nonadherence with medical regimens is a life-threatening problem. This paper discusses how designing positive user experiences can lead to increased patient adherence to medical regimens. The importance of positive affect in relationship to medical adherence is well documented within the discipline of Health Psychology. Therefore, when designers are called on to positively shape a user's experience with technology-based medical devices, principles from this body of knowledge can provide a framewo

This paper presents a novel domain-independent text segmentation method, which identifies the boundaries of topic changes in long text documents and/or text streams. The method consists of three components: As a preprocessing step, we eliminate the <i>document-dependent</i> stop words as well as the generic stop words before the sentence similarity is computed. This step assists in the discrimination of the sentence semantic information. Then the cohesion information of sentences in a document o

Gennari November 2004 Proceedings of the 2004 ACM conference on Computer supported cooperative work Full text available: pdf(260.11 KB) Additional Information: full citation, abstract, references, index terms	
Annotation is central to iterative reviewing and revising activities in asynchronous collaborative writing. Currently most digital annotation models and systems assume static context information and provide far less functionality than physical annotations. We extend prior annotation research by Marshall and Cadiz and design an activity-oriented annotation model to mimic the rich functionality of physical annotations for an enhanced collaborative writing process. In this model, we define an an

Full text available: pdf(284.50 KB) Additional Information: full citation, abstract, references, index terms

This manuscript is addressed particularly to the researcher and data analyst faced with the need to manage and analyze data sets in a form of complex file. This complex file arises when data is collected from multiple sources over a period of time. In the health sciences, studies of this nature are quite common, examples being large multi-centered clinical trials, patient record studies, health surveys, patient monitoring studies, etc.. Such studies generally contain variable amounts of dat ...

62 Pen-based, mobile decision support in healthcare

Richard N. Shiffman, Bryant T. Karras, Sujai Nath, Laura Engles-Horton, Geoffrey J. Corb August 1999 ACM SIGBIO Newsletter, Volume 19 Issue 2

Full text available: pdf(255.79 KB) Additional Information: full citation, abstract, references

The use of computers has become well established throughout the business enterprise; but computer usage within the health care sector has lagged, particularly for automation of interactions between individual clinicians and their patients. A number of factors have contributed to this including difficulties in representing medical knowledge in computerprocessible formats, the limited application of standards for data recording and transmission, and problems in human-computer interaction. A major ...

63 Empirical bayes screening for multi-item associations

William DuMouchel, Daryl Pregibon

August 2001 Proceedings of the seventh ACM SIGKDD international conference on Knowledge discovery and data mining

Full text available: pdf(931.67 KB)

Additional Information: full citation, abstract, references, citings, index terms

This paper considers the framework of the so-called "market basket problem", in which a database of transactions is mined for the occurrence of unusually frequent item sets. In our case, "unusually frequent" involves estimates of the frequency of each item set divided by a baseline frequency computed as if items occurred independently. The focus is on obtaining reliable estimates of this measure of interestingness for all item sets, even item sets with relatively low frequencies. For example, in ...

Full text available: pdf(663.04 KB) Additional Information: full citation, abstract, references Publisher Site	
Some types of documents need to meet size constraints, such as fitting into a limited number of pages. This can be a difficult constraint to enforce in a pipelined natural language generation (NLG) system, because size is mostly determined by content decisions, which usually are made at the beginning of the pipeline, but size cannot be accurately measured until the document has been completely processed by the NLG system. I present experimental data on the performance of single-solution pipeline
